Abstract (en)

[origin: WO2019068742A1] The invention relates to a method for carrying out a payment transaction on a bank terminal (2, POS) using an electronic payment device (1), said device comprising at least two payment applications (1-4), said method comprising: - a step of data communication (STATUS) from the device to the terminal during a transaction, said data comprising at least information of a first type (ADF) identifying each payment application of the device; - a step of configuring the device so that said data comprise information of a first type (ADF) relative to at least one disabled payment application (1, 3). The invention likewise relates to the corresponding system.
