Abstract (en)  
[origin: EP3692907A1] Provided is a biological information detection device capable of restraining noise from being mixed with a signal relating to biological information. A biological information detection device 1 includes an electrode pad 4 that is able to detect a signal (bioelectric signal) relating to biological information of a subject (for example, a fetus in a mother's body), a connector 3 that is connectable to the electrode pad 4, and a cable 23 that is connected to the connector 3 and is able to transmit the signal. The electrode pad 4 and the connector 3 are provided with fixing members 412 and 33 that are attachable to and detachable from each other, respectively.
