Abstract (en)

There is described a package assembly (1, 1', 1") comprising a package (2) filled with a pourable food product and a drinking straw (3, 3"). The package (2) comprises at least a main opening (6) configured to allow for the insertion and/or introduction of the drinking straw (3, 3") through the main opening (6) into the package (2) and the drinking straw (3, 3") comprises at least an inlet opening (11) and a tubular main portion (16) configured to be inserted, in use, into the package (2), and having the inlet opening (11). The package assembly (1, 1', 1") also comprises a retention group (22) comprising at least a first retention member (23) associated to the package (2) and a second retention member (24) associated to the drinking straw (3, 3'). The first retention member (23) and the second retention member (24) are configured to interact with one another in such a manner to impede and/or block the separation and/or removal of the drinking straw (3) from the package (2) after, in use, the introduction and/or insertion of the main portion (16) into the package (2).
