Abstract (en)  
The invention relates to a work site barrier system comprising: a barrier (2) comprising a top portion (6) having a groove (8), which groove comprises opposing side walls (9), wherein at least one side wall comprises first and second wall portions being positioned adjacent to each other and at different distances to a central plane of the groove measured in a direction normal to the plane, wherein the plane extends between an entrance opening of the groove and a bottom of the groove; a panel (3); and a connector (4) arranged to connect said panel to said barrier, wherein the connector comprises a panel engagement portion (41) connected with the panel, and a barrier engagement portion (42) arranged to be received in said groove, wherein the barrier engagement portion comprises a fixing device (49), arranged to engage at least one side wall at at least one of said first and second wall portions in order to fix the barrier engagement portion to the barrier.
