Abstract (en)
The invention provides a drainage channel (100) for installation in a screed (200). The drainage channel (100) comprises a collection tray (110) for collecting water to be drained. The drainage channel (100) comprises a flange (120) around the collection tray (110) for aligning the drainage channel (100) with the screed (200). The flange (120) extends laterally from a top edge (113) of the collection tray (110) up to an outer edge (122) of the flange (120). The drainage channel (100) comprises a waterproof cloth (130) for forming a waterproof cover over the flange (120) and the screed (200). The waterproof cloth (130) is attached to a top side (121) of the flange (120) from the top edge (113) of the collection tray (110) up to a predetermined attachment edge (123) between the top edge (113) of the collection tray (110) and the outer edge (122) of the flange (120).
