Abstract (en)

[origin: WO2019073429A1] The item of clothing (10) consists of a length of material (12) for being worn by a user. The length has an outer face (12a) facing, in use, the outside, and an inner face (12b) operatively facing the user. The length has a pre-marked region (14) which is situated in a substantially central position and is adapted to be at least partially opened, so that, in use, it can be crossed, by the head and/or arms of the user. The pre-marked region is defined by a plurality of sections (14a-d), which are pre-marked, in particular through ironing, and are joined to one another. The sections are defined by a point-a-jour and are configured to be at least partially trimmed in a customizable manner, so as to define the size of such aperture.
