Abstract (en)

[origin: WO2019073017A1] The invention relates to a device (10) for degassing dialysis concentrates for automatic density measurement in mixing installations, having - a filter element (53) through which dialysis concentrate can flow, - wherein the filter element (53) converts a dialysis concentrate containing gas bubbles at the inlet side to a dialysis concentrate free of gas bubbles at the outlet side. The invention further relates to a mixing installation (M) having a device (10) according to the invention, and to a method for degassing dialysis concentrates for automatic density measurement in mixing installations (M), said method having the following steps: - the dialysis concentrate to be measured and containing gas bubbles is introduced (100) into the filter element (53), - gases are filtered out (200), - the dialysis concentrate free of gas bubbles is conveyed out (300), - the density of the dialysis concentrate free of gas bubbles is measured (400).
