Abstract (en)

[origin: WO2019072543A1] The invention relates to a separating system of a flue-gas desulfurization system of a ship for separating drops (11) from a flue gas, which flows in a flow direction (R), preferably with a flow component directed vertically upward, and which exits through the outlet opening of a smokestack, said separating system comprising at least one plate (1), which is elongate in a longitudinal direction (L) and the longitudinal direction (L) of which is oriented perpendicularly or obliquely to the flow direction (R), the plate (1) comprises at least one chamber (2) having an opening (2a) extending in the longitudinal direction (L), the opening (2a) being arranged on a side of the plate (1) facing the flow direction (R).
