Abstract (en)

[origin: KR20190085819A] The present disclosure relates to a 5th generation (5G) or pre-5G communication system to support a higher data transmission rate than that of a 4th generation (4G) communication system such as long term evolution (LTE). The present disclosure provides an apparatus and a method for effectively selecting a transmission carrier in a wireless communication system. The present disclosure relates to an operation method of a terminal in the wireless communication system comprising the following processes: receiving configuration information from a base station; and selecting a transmission carrier and a resource pool based on the configuration information.
