Abstract (en)
[origin: WO2020164916A1] A method for producing an ingot made of a solid glass forming alloy, comprising the steps of: providing a homogeneous melt of a solid glass forming alloy; pouring the homogeneous melt into a mold, wherein the mold, at the contact surface with the melt, does not cool below the glass-forming temperature of the alloy for at least seconds; and cooling the melt below the glass transition temperature of the solid glass forming alloy to obtain the ingot.
