Abstract (en)  
In a large printer including a work platform, the state of printing to a medium is preferably inspected without being interfered by the work platform. The printer includes a print unit 11 that performs a printing process to a medium 1, a conveying portion 2 that conveys the medium 1 so that the medium 1 passes through the print unit 11, and a work platform 21 disposed adjacent to the print unit 11 and above the conveying portion 2. Here, the work platform 21 is provided with an opening and closing mechanism, and can be opened and closed.
