Abstract (en)
[origin: EP3696421A1] An air compression device includes: a compressor structured to generate compressed air; a motor structured to drive the compressor; a multiblade fan structured to be driven by the motor to generate an air flow; and a first cooler structured to cool the compressed air and a second cooler structured to cool the compressed air cooled by the first cooler by the air flow. The first cooler cools the compressed air by an air flow that has cooled the second cooler.
