Abstract (en)

[origin: WO2019075499A1] The invention relates to a construction kit for assembling a honeycomb structure from components which each comprise three adjacent sides of a honeycomb. The object of the invention of providing a construction kit for honeycomb structures made up of components that is modular, readily transportable but also stable is achieved according to the invention in that the components each have an outer shell (2), an inner shell (3) and spacer elements (42) for producing a spacing between outer shell (2) and inner shell (3), wherein outer shell (2), inner shell (3) and spacer elements (42) can be connected to one another by means of fastening elements comprising slots and/or tongues.
