Abstract (en)

[origin: WO2019076680A1] The invention relates to an orthopaedic device having a piston (10) for arrangement in a damper (1) with a cylinder (2), in which the piston (10) is mounted so as to be displaceable relative to the cylinder (2), wherein the piston (10) has a main body (3), on the exterior (31) of which at least one contact element (6) is arranged, which can be displaced in the direction toward the cylinder (2) and is coupled to a resilient element (4), characterized in that the resilient element (4) can be prestressed in the displacement direction of the contact element (6) by means of an adjustment device.
