Abstract (en)

[origin: WO2019076710A1] A toy construction set comprising a number of toy building blocks with one or more coupling knobs and coupling sockets adapted for releasable frictional engagement with the couplings knobs on another building block in the toy construction set, and wherein the toy construction set further comprises a building element comprising a bistable band, and where the band has a first stable shape where it is curved about a first curvature axis extending parallel with the longitudinal direction of the band and at a distance from a first side of the band, and a second stable shape where it is curved about a second curvature axis extending substantially perpendicular with the first curvature axis, and where the bistable band on the first side of the bistable band comprises multiple coupling knobs arranged in a uniform, preferably square pattern, and where each coupling knob is adapted for frictional engagement with a coupling socket of another building block in the toy construction set.
