Abstract (en)
[origin: WO2019076741A1] A connection assembly (10), having a pull-in line (20), a floating part (50) and a connecting part (70). The floating part (50) has a buoyant body (51), a connecting part reception interface (61), a first locking element (69), a pull-in line guide element (63), and a loading hose connection interface (57). The connecting part (70) has a second locking element (77) entering into locking engagement with the first locking element (69), a pull-in line connection interface (71), and a crane string connection interface (75). The pull-in line extends from the pull-in line connection interface to the pull-in line guide element, and further to a pull-in section (20a) of the pull-in line, such that a pull in the pull-in section (20a) pulls the connecting part (70) into the connecting part reception interface (61), thereby enabling a locking engagement with the floating part (50).
