Abstract (en)
[origin: WO2019077372A1] An escalator cleaning apparatus (1) having a cleaning head (2) and a brush element (3) extending from the leading or trailing edge of the cleaning head (2). The cleaning head (2) includes a cleaning pad (4) with castellations (43) on one side, which are configured to engage the grooves of an escalator step, and the brush element (3) is configured to engage a gap between escalator or traveller steps. A cleaning cover (6) is releasably securable to the cleaning head (2) and is configured to conform to the castellations (43). The cleaning apparatus (1) includes a clamp (5) connected to the cleaning head (2) and movable between a first, loading position and a second, clamped, position. A gap is formed between the clamp (5) and the cleaning head (2) in the first position and the clamp (5) holds the removable cover (6) against the cleaning head (2) in the second position.
