Abstract (en)
[origin: WO2019076823A1] A process for producing a textile article having a water-repellent textile surface is described, comprising the following steps: plasma-treatment of a textile surface such that a plasma-treated textile surface results, and subsequently wet-chemical treatment of the plasma-treated textile surface, or of a textile surface produced therefrom in further steps, with a water repellent, such that a plasma-treated water-repellent textile surface results. Moreover, a textile article that is producible with the process according to the invention is described. Furthermore, the use of a low-pressure plasma process for the preparatory treatment of a textile surface of an article before the textile surface is made water-repellent by wet-chemical means is described.
