Abstract (en)
[origin: WO2019076399A1] The invention relates to a motor vehicle door lock, which is equipped with a locking mechanism (1, 2) and with a drive (5, 6, 7, 8) for the locking mechanism (1, 2), in particular for electrical opening/closing. The drive (5, 6, 7, 8) has at least one drive element (6, 7, 8), which acts indirectly or directly on the locking mechanism (1, 2). Furthermore, the drive element (6, 7, 8) interacts with at least one further element (9) depending on position. According to the invention, the further element (9) is designed as a coupling element (9) of an additionally realized mechanical actuation lever chain (9, 10, 11).
