Abstract (en)

[origin: WO2019076802A1] The present invention relates to a gas-filled insulating glazing unit for glazed assemblies. The insulating glazing unit comprises one or more coupling members located in the gas-filled interspace between a first and second glass pane. Each coupling member comprises a plurality of piled and adhesively interconnected parts wherein at 5 least one stiffening part is comprising a rigid material and at least one stress release part comprises a viscoelastic polymer.
