Abstract (en)

[origin: WO2019076691A1] A method of determining the opening delay of a solenoid actuated fuel injector (ODinjx), said fuel injector including a solenoid actuated valve adapted to actuate a needle valve, said needle valve comprising a needle adapted to move from a closed state to an open state and to a closed state during an operational cycle of said injector, comprising the following steps: a) providing series of test injection cycles with varying solenoid actuator drive pulse durations information (Ton); b) determining for each cycle, the closing time of the solenoid actuated valve (VCT); c) determining for each cycle, the needle closing time (NCT); d) determining for each cycle, the needle falling start time (NFST); e) determining for each cycle a Control Chamber filling Time (CCFT) value from the values determined from step d) and step b); f) determining for each cycle, a needle closing delay NCD from the values at steps b) and c); g) providing a test plot by plotting the value of needle closing duration NCD against from the sum of the values of Ton, VCD, and CCFT; h) determining a threshold value of CCFT, i) from the determined plot, determining the value of said sum at the intersect of said plot at a level of NCD of the CCFT threshold; j) determining the opening delay (ODinjx) from the determined sum value.
