Abstract (en)
[origin: CN111604944A] The present invention relates to a blade device comprising a blade carrier and a blade, wherein the blade carrier comprises a blade seat having an abutment surface for a first blade surface and a second blade surface opposite the first blade surface is substantially freely accessible; the blade carrier has a holding device for holding the blade in the blade seat, the holding device comprising a first form-fitting device associated with the blade carrier and a second form-fitting device associated with the blade; the form-fitting device is designed in such a way that the blade has a degree of freedom in at least one direction in order to be disengaged from the blade seat. The invention is characterized in that the holding device has a locking device which comprises at least one locking element that can be moved between a locking position and a release position, said locking element overlapping a region of the second blade surface and locking the movement in the direction of said degree of freedom. The invention further relates to a knife with the blade device.
