Abstract (en)

Described is a command and control apparatus (1) for a spinning machine for the production of chenille yarn comprising feeding means (2) configured for feeding a plurality of threads to a machine for the production of chenille yarn. The feeding means (2) comprise at least a first roller (3) and a second roller (4) for feeding, respectively, at least one fancy thread and a pair of binding threads to the machine for the production of chenille yarn. The apparatus (1) also comprises command and control means (7) configured for detecting at least one property of at least one chenille yarn at the outlet from the machine for the production of chenille yarn and for modifying by feedback at least one operating parameter of the feeding means (2) as a function of the property detected.
