Abstract (en)
[origin: WO2019081909A1] A fully implantable distractor (10) comprises a fixable portion (12), a movable portion (14) and a single distractor arm (16) which defines a movement path of the movable portion (14) relative to the fixable portion (12). The distractor (10) further comprises a resilient member provided between the fixable portion (12) and the movable portion (14) to, in use, move the movable portion (14) relative to the fixable portion (12) along the movement path defined by the distractor arm (16). The resilient member is formed from a shape memory material.
