Abstract (en)

[origin: WO2019081647A1] The present invention describes a device for making available a skin or wound dressing comprising an active substance, wherein the device comprises at least two chambers for storing two liquids, said chambers being able to be opened by mechanical action such that, after the chambers have been opened, the liquids are miscible and transferrable to an active substance support. The present invention furthermore describes a wound treatment kit and a method for making available a skin or wound dressing.
