Abstract (en)  
[origin: WO2019081336A1] The invention relates to a bottle (1) for holding liquids, having a bottle neck (1.1) and a crown cap (2) for closing the bottle (1) in a first position (PI), in which the crown cap (2) closes the bottle (1). According to the invention, after the crown cap (2) has been removed from the first position (PI), said crown cap assumes a second position in an insertion section of a closure means retainer (3) situated on the bottle neck (1.1), wherein a tab (3) is connected to the crown cap (2) in the first position (PI) and in the second position. This achieves the advantage that the crown cap (2) is not disposed of improperly and thus without consideration of the environment.
