Abstract (en)
[origin: WO2019081280A1] The present invention relates to a solid, particulate composition comprising at least one water-soluble carrier material and at least one fragrance, wherein the carrier material is a water-containing salt (hydrate) whose water vapour partial pressure at a specific temperature in the range from 30 to 100°C corresponds to the H₂O partial pressure of the saturated solution of this salt, such that the salt melts at this temperature in its own crystal water. The composition is characterized in that it has a distinctly improved water solubility compared to known polyethylene glycol-based compositions. The invention further relates to methods for producing the solid composition, and to a washing or cleaning product comprising the solid composition. In addition, the present invention also relates to the use of a washing or cleaning product of this kind for cleaning textiles or hard surfaces, and corresponding methods for cleaning textiles or hard surfaces using a washing or cleaning product of this kind.
