Abstract (en)

[origin: WO2019081459A1] Disclosed is a fuel line for use in a vehicle using fuel, the fuel line (14) being designed as an integrally formed multi-chamber line comprising at least two fuel-conducting conduits (8, 10), separated from one another, each conduit forming a chamber (14I, 14II). A first chamber (14I) conducts a fuel in a first flow direction, whereas a second chamber (14II) conducts the fuel in the first flow direction, or in a second flow direction that is opposed to said first flow direction. Further disclosed is a correspondingly adapted connection piece (16) for connecting to a multi-chamber line of this type. Also disclosed is a fuel supply system for a vehicle, said fuel supply system having at least one fuel line and at least one connection piece of the aforementioned type.
