Abstract (en)  
[origin: WO2019082002A1] A manifold (70, 150) for a multistage pump (10) provided with a plurality of pumping chambers (15), wherein the manifold (70, 150) comprises a body (75, 155) which is so shaped as to define a duct (80, 160) extending along a path (P) and exhibiting an access mouth (125, 240) and a plurality of connection mouths (85, 165), wherein each connection mouth (85, 165) is adapted to be connected to a corresponding pumping chamber (15) of the pump (10), wherein the body (75, 155) is subdivided into at least a first portion (75a, 155a) and a second portion (75b, 155b), said manifold (70, 150) being characterized in that the first portion (75a, 155a) and the second portion (75b, 155b) are substantially subdivided at a secant plane (A, B) parallel to a plane whereon the path (P) is lying.
