Abstract (en)

[origin: WO2019106267A1] The invention relates to a solar power plant, in particular a concentrated solar power plant, provided with a device for measuring direct normal insolation (DNI), comprising: - a mirror (4) intended to reflect direct solar radiation and disposed on a movable support, - a light sensor (2) arranged with respect to the mirror so as to detect solar radiation reflected by the mirror, - a solar tracker designed to orient the mirror towards the sun, the solar tracker being provided with means for actuating the support that are able to move the mirror (4).
