Abstract (en)

[origin: WO2019081847A1] The present invention allows a connected object (4) to calculate its own position without using means that are embedded and specific for doing this. For this purpose, the connected object possesses a wireless receiving means for receiving signals coming from a plurality of located terminals (2), said signals comprising location data for locating said located terminals. The connected object (4) comprises a calculating means (10, 12) capable of determining a piece of geolocation information of its position based on a plurality of data coming from various located terminals (2).
