Abstract (en)

[origin: WO2019081096A1] The invention relates to a computer program product, a signal sequence, a device and a method for sharing use of a mobile service vehicle (20) which is composed, temporarily, of a vehicle carriage (10) and an interconnected passenger compartment (1) specifically fitted out for the service in question, for providing a service during the journey. The method comprises the following steps: determining a need of a first client (12) for obtaining the service during the journey, determining a need of a second client (15) for obtaining the service during the journey, automatically determining that the first client (12) and the second client (15) agree to sharing the journey in the mobile service vehicle (20) and, in response to this, automatically determining a route for said mobile service vehicle (20), along which the first client (12) and the second client (15) can at least intermittently share use of said mobile service vehicle (20).
