Abstract (en)

[origin: WO2019081843A1] The device for detecting mooring in a navigable area comprises: - means for detecting the presence of a boat close to a berthing member or attached to said berthing member, - means (56) for transmitting information representative of the detection performed and - means (59) for transmitting a request (58) to a communicating portable terminal (56) associated with the user of the boat of which a movement has been detected, in order to receive, in return, an envisaged duration of presence of the boat in the navigable area.
