Abstract (en)
[origin: WO2020173611A1] The invention relates to a transport device for at least one document file (2), which has a spine (3) and two leaves (4), comprising a frame (5) having a base panel (6) for supporting the spine (3) of the document file (2), a cover panel (7) and two lateral panels (8, 9), which retain the base panel (6) and the cover panel (7) at a predetermined distance (A) to one another, and two straps (10) connected to the cover panel (7) for retaining the free end (41) of one of the leaves (4), wherein the straps (10) are each shorter than said distance (A) when viewed in the distance direction (a), and wherein the straps (10) can be swivelled relative to the lateral panels (8, 9), and wherein, in a state of the transport device (1) in which it is ready for transporting the document file (2), the base, cover and lateral panels (6-9) are connected to the frame (5), while the straps (10) can be swivelled relative to the lateral panels (8, 9).
