Abstract (en)

[origin: EP3703043A1] Disclosed in the present invention is a drive compensation circuit, comprising: a first temporary storage unit, a second temporary storage unit, a gating unit, an electric displacement converter, a digital-to-analog conversion unit and an amplification unit; the first temporary storage unit and the second temporary storage unit are respectively connected to the gating unit, while the gating unit, the electric displacement converter, the digital-to-analog conversion unit and the amplification unit are connected in sequence.
