Abstract (en)

[origin: WO2019089436A1] A fluid application device (10) includes an applicator head (16) and a nozzle assembly (22) fluidically coupled to the applicator head. The nozzle assembly includes a first conduit (430) configured to receive a first fluid from the applicator head, the first conduit having a first inlet configured to receive the first fluid and a flow-distributing channel (431) downstream from, and in fluid communication with the fluid inlet, the flow-distributing channel configured to direct the first fluid in a lateral direction. The nozzle assembly further includes an application conduit (436) having a first fluid receiving section configured to receive the first fluid from the flow-distributing channel, and an orifice (428) fluidically connected to the application conduit, the orifice configured to discharge the first fluid for application onto a strand of material.
