Abstract (en)  
[origin: WO2019088831A1] Cap (20) for a spouted pouch, with multiple axial and radial coupling means. Axial coupling means enable engagement of clamping portions (41) of a handle member (24) with a tamper-evident ring (50) of a further cap, or a lower end (28) or lower flange thereof. Radial coupling means may enable engagement of handle tabs (31) of the handle member with slots (32', 33', 34') of the handle member of a further cap (20'), with central axes (22a) thereof defining a single angle, or multiple different straight and/or oblique angles in between them, respectively by means of equally oriented single-direction slots (32), or differently oriented single-direction slots (32,33) and/or multidirectional slots (34). Radial and axial coupling means may form part of a handle member comprising two diametrically opposite lateral wings (25).
