Abstract (en)  
[origin: CA3080850A1] The invention serves to increase the flexibility and efficiency of a storage system. This is achieved with a shuttle vehicle (10) for transporting stored goods in a shelving system, comprising a chassis (12) having wheels (14-1, , 14-4) mounted thereon in order to move the shuttle vehicle (10) along guide rails (16-1, 16-2) of the shelving system, a telescopic system (10) moveably guided on the chassis, which can be extended and retracted relative to the chassis (12) in a plane and in a self-supporting manner on both sides of the chassis (12), and a lifting system for raising and lowering the telescopic system (18) relative to the guide rails (16-1, 16-2) of the shelving system. This is also achieved with a shelving system in which the shuttle system according to the invention is used.
