Abstract (en)
[origin: WO2018114375A1] What is presented is a device for controlling the temperature of, and in particular for drying, objects (12), in particular vehicle bodies (16), having a housing (22) which integrates a temperature-control chamber (18) that comprises at least one air outlet (68) and at least one air inlet (76). The temperature-control chamber (18) is assigned at least one heating unit (72) in which it is possible to generate a hot primary gas flow (92) and to which it is possible to supply, from the air outlet (68), air (90) that is to be heated. The heating unit (72) comprises a heat exchanger device (94) into which the hot primary gas (92) can be guided and in which it is possible to heat air (90) from the temperature-control chamber (18) using hot primary gas (92), which air can be supplied, as heated recirculation air, in a circuit via the at least one air inlet (76) back to the temperature-control chamber (18). The heating unit (72) comprises at least a first and a second flow outlet (106, 108) via which heated recirculation air leaves the heating unit.
