Abstract (en)
[origin: WO2019086416A1] The invention relates to a system and to a method for controlling the access of persons at access regions (e.g. gate, door), wherein the person is authenticated by means of an access control device on the basis of an identification medium (badge, RFID chip) assigned to the person; the location of a mobile device (e.g. mobile communication terminal such as a smartphone or iPod) assigned to the person is determined; the location of the mobile device is transmitted to the access control device; the location of the mobile device is checked with the location of the corresponding access region by means of the access control device; access is authorized for the person if the location of the mobile device assigned to the person and the location of the corresponding access region match and a positive authentication of the person on the basis of the identification medium (badge, RFID chip) assigned to the person has occurred.
