Abstract (en)  
Aerodynamic hump (2) for garment (3), preferably sport garment, in particular for motorcycle suit or jacket, the hump comprising:- an underlying base body (4),- a portion (10) with a substantially laminar developing, preferably part of said garment (3), which is positioned externally and above with respect to said underlying base body (4),- at least one covering body (6) which is positioned externally and above said portion (10) and is removably associated with the underlying base body (4), said at least one covering body (6) having at least one external surface portion (11), configured so as to define and give, alone or in combination with said base body (4), an aerodynamic effect to said hump,- fastening means (15, 15') configured to constrain said covering body (6) to the underlying base body (4) by crossing said portion (10) with a substantially laminar development.
