Abstract (en)
An inkjet recording apparatus (100) includes a recorder (20) and a controller (50). The recorder includes nozzles to eject ink. The controller controls operation of the recorder. The controller determines, for a defective nozzle having a defect in ink ejection, a first nozzle having an actual ink landing position, where the ink lands, closest to a reference ink landing position of the defective nozzle as a supplementing nozzle that supplements the defect of the defective nozzle.
