Abstract (en)
[origin: AU2020201022A1] Abstract: The invention relates to a system comprising a ground drilling device having a control device for operating the ground drilling device, wherein the system moreover comprises an input device functionally coupled to the control device for entering at least one parameter for the operation of the ground drilling device, particularly a parameter bringing about a starting of the drilling with the ground drilling device or a stopping of the drilling performed with the ground drilling device, wherein the input device is designed as a remote control.
