Abstract (en)

[origin: EP3705963A1] The present invention is concerned with an intent-based automation engineering method for automation of a production process, comprising the steps: receiving an intent model (I), correlating to process intent, comprising production process functions, constraints on measurable properties on the production process functions and/or production process function sequences required for the production process; receiving a process model (P), correlating to process knowledge comprising a production process behaviour; determining a machine-readable production model (M) linking the received intent model (I) to the received process model (P); and determining a control strategy (S) for controlling the production process dependent on the provided production model (M).
