Abstract (en)  
[origin: WO2019092040A1] The present invention relates to a vial (1) for a kit for detecting blood in stools, comprising: a container (10) configured for receiving a liquid (L); a stopper (20) configured for being attached to the container (10) and for closing the mouth (12); a fluid-impermeable membrane (30) which divides said container into a first compartment (14) and into a second compartment (15); and a microfluidic chip (40) for detecting the target substance, said microfluidic chip (40) being housed in the second compartment (15), and a breaking component (50) which is configured for breaking the membrane (30).
