Abstract (en)
[origin: WO2019091916A1] The invention relates to a child seat device having at least one backrest seat shell (26a; 26b), which has at least two backrest side regions (30a, 32a; 30b, 32b), which laterally delimit the backrest seat shell (26a; 26b) and define, at least in part, a seat region for a child. According to the invention, the child seat device has at least one reducer (46a, 48a; 46b, 48b), which is height-adjustable relative to the backrest seat shell (26a; 26b) and which is provided in order to reduce the seat region defined by the backrest side regions (30a, 32a; 30b, 32b).
