Abstract (en)

[origin: WO2019086070A1] The invention relates to an electrical connector housing (2) with at least one locking clip (1), which is mounted pivotably via a bearing pin (3) and has a locking region (21) and an actuation region (4). In order to reversibly lock the electrical connector housing (2) to a mating electrical connector housing (2'), the locking region (21) engages over bearing journals (3') integrally moulded on the mating electrical connector housing (2'). The locking clip (1) has a locking means (10) for blocking the pivot movement of the locking clip (1). In this manner, an accidental release of the plug-in connection can be prevented.
