Abstract (en)
[origin: CN111356381A] The present invention relates to a clamp. In order to prevent the removal of a wrist strap attached to a device by means of two ends, the clamp (1) comprises at one end a strap closure with a buckle (11) and a closing pin (12), while the other end is provided with a longitudinal row of holes (13) for receiving the closing pin. The clamp is configured to be slid over the buckle while the wrist strap is closed, said clamp being provided with a cover side (2) and comprising at least two lateral sides (3,4), and at least two legs (8) being placed on the inside of the cover side of the clamp and being directed inwardly in order to form an angle with the cover side.
