Abstract (en)
[origin: WO2019092074A1] The invention relates to a cleaning system comprising a storage container (1) having a lower side (2) and an upper side (3), and cleaning appliances (4) that are detachably connected to the storage container (1) in a non-destructive manner, wherein the cleaning appliances (4) each comprise a substantially rectangular functional part (5), the functional part (5) comprises at least one longitudinal side (6) and at least one transverse side (7) and a handle (9) that extends in the axial direction (8) and is connected to the functional part (5) in an articulated manner such that the functional part (5), as observed in the longitudinal direction (10) thereof, can be pivoted parallel to the handle (9), the storage container (1) comprises a number of holding devices (11) and/or guides (12) corresponding to the number of cleaning appliances (4) to be transported, which are respectively adjacently arranged, as observed transversely to the axial direction (8) of the handles (9), in order to receive the respective transverse sides (7) and/or longitudinal sides (6) of the functional parts (5), and the transverse sides (7) and/or longitudinal sides (6) of the cleaning appliances (4) connected to the storage container (1) are adjacently arranged in a substantially positive manner in the corresponding holding devices (11) and/or guides (12), without covering each other.
