Abstract (en)

[origin: WO2019170180A1] The invention relates to a device (10) for the dosed filling of a container (40) with a filling material (22). The device (10) has a holding unit (42) for holding the container (40) and a filling unit by means of which a defined amount of the filling material (22) can be withdrawn from a material store (20) and transferred into the container (40). The filling unit has at least one dosing chamber (32). Said dosing chamber (32) is mounted displaceably so that the dosing chamber (32) is alternately in a first position (36) and in a second position (38). In its first position (36), the dosing chamber (32) is in contact with the material store (20) so that filling material (22) can be transferred out of the material store (20) into the dosing chamber (32). In its second position (38), the dosing chamber (32) is situated above the container (40) so that the filling material (22) in the dosing chamber (32) can be emptied into the container (40). According to the invention, the material store is in the form of a separate container (20) and can be fastened detachably to the device (10) by means of a fastening unit (26).
